## INTRODUCTION

Priority health risk behaviors (i.e. preventable behaviors that contribute to the leading causes of morbidity and mortality) are often established during childhood and adolescence and extend into adulthood. Ongoing surveillance of youth risk behaviors is critical for the design, implementation, and evaluation of public health interventions to improve adolescent health. The Youth Risk Behavior Survey (YRBS) is a national surveillance system that was established in 1991 by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of health risk behaviors among youth. The Nevada High School YRBS is a biennial, anonymous, and voluntary survey of students in $9^{\text {th }}$ through $12^{\text {th }}$ grade in regular public, charter, and alternative schools. In 2015, tribal schools in Nevada were also surveyed. The survey asks students to selfreport their behaviors in six major areas of health that directly lead to morbidity and mortality, these include:

1) Behaviors that contribute to unintentional injuries and violence;
2) Sexual behaviors that contribute to human immunodeficiency virus (HIV) infection, other sexually transmitted diseases, and unintended pregnancy;
3) Tobacco use;
4) Alcohol and other drug use;
5) Unhealthy dietary behaviors; and
6) Physical inactivity.

## METHODS

This report summarizes YRBS data for American Indian / Alaska Native high school students from tribal and non-tribal schools. Three tribal schools with high school students participated in the 2015 YRBS and represent the tribal school sample: Pyramid Lake High School, McDermitt High School, and Owyhee High School. Parents of all tribal high school students were notified about the survey and provided passive parental permission by returning a form if they did not want their child to participate. All students who did not have their parent decline participation were surveyed during normal class periods. The non-tribal high school sample was obtained from the statewide 2015 YRBS and represents American Indian / Alaska Native students who do not attend tribal schools. The 2015 Nevada High School YRBS was designed to ensure that every eligible student had an equal chance of selection and classes with eligible students were randomly selected for participation. The procedure for obtaining parental consent varied by school district (please see 2015 Nevada High School YRBS Report).

The YRBS was administered to all students in sampled classes from February to May, 2015. Tribal high school data and non-tribal high school data were weighted separately to account for non-response bias and increase generalizability of results. The 2015 American Indian / Alaska Native High School YRBS report summarizes survey responses from the tribal school sample, the non-tribal school sample, and a combined sample. The statewide High School YRBS estimates are also provided for comparison.

## KEY FINDINGS

## Tribal Schools compared to Non-Tribal Schools

The prevalence estimates for most risk behaviors were higher among tribal school American Indian / Alaska Native students compared to non-tribal school American Indian / Alaska Native students. While most of these differences are not statistically significant due to small sample size, we have highlighted risk behaviors with the largest difference below.

## Driving Safety

- Drove a car while drinking in the past 30 days (20.5\% vs. 7.9\%)
- Texted while driving in the past 30 days ( $59.9 \%$ vs. $41.5 \%$ )

## Violence-Related Behaviors

- Carried a weapon in the past 30 days ( $44 \%$ vs. $27 \%$ )
- Carried a gun in the past 30 days ( $27.6 \%$ vs. $12.3 \%$ )
- Carried a weapon on school property in the past 30 days ( $23.5 \%$ vs. $8.6 \%$ )
- Physical fighting in the past 12 months ( $44.5 \%$ vs. $30.9 \%$ )
- Physical fighting on school property in the past 12 months ( $25.7 \%$ vs. $5.2 \%$ )
- Ever experienced physical dating violence ( $40.0 \%$ vs. $10.4 \%$ )
- Ever experienced sexual dating violence (29.8\% vs. 7.7\%)
- Ever witnessed adult violence in the household (35.7\% vs. 19.9\%)
- Purposely hurt themselves without wanting to die in the past 12 months (36.7\% vs. 21.6\%)

## Tobacco Use

- Ever smoked cigarettes (70.2\% vs. $51.8 \%$ )
- Smoked a cigarette before age 13 (33.4\% vs. 17.4\%)
- Smoked a cigar in the past 30 days ( $25.5 \%$ vs. $14.7 \%$ )
- Any tobacco use in the past 30 days (39.7\% vs. $26.4 \%$ )

## Electronic Cigarette Use

- Ever smoked an electronic cigarette (76.4\% vs. 63.1\%)

## Marijuana and Other Drug Use

- Smoked marijuana before age 13 ( $28.1 \%$ vs. $16.8 \%$ )
- Ever used inhalants (20.9\% vs. 8.4\%)
- Ever lived with an alcoholic, problem drinker, or drug abuser (54.8\% vs. 32.9\%)

## Diet

- Drank soda at least one time per day in the past week (37.3\% vs. 9.3\%)
- Drank soda at least two times per day in the past week (23.5\% vs. $5.6 \%$ )

## Weight

- Obesity (40.0\% vs. 7.2\%)
- Described themselves as slightly or very overweight (55.2\% vs. 34.0\%)

## Protective Behaviors

- Participated on a sports team in the past 12 months ( $80.1 \%$ vs. $47.8 \%$ )
- Slept 8 or more hours on an average school night (29.9\% vs. $18.3 \%$ )

## RESULTS

## Participant Characteristics

Table 1: Demographic characteristics of participating students, by sex, age, grade, and school type - Nevada, Youth Risk Behavior Survey, 2015

|  |  | State Total |  | All American Indian / Alaska Native Students |  | Tribal Schools |  | Non-Tribal Schools |  |
